

Hi!

This document is just a sample for this book reader. You can try reading any book just by adding the pdf document in this project folder.

To do so, you just have to enter the name of your document in the source code.

In the 11th line of the source code, in the **“open”** function you have to **replace** the name of your document with the name **‘Audio_Book_Sample.pdf’** (along with the extension).
